Serial No.: 10/020,004 - 2 - Art Unit: 2826

Conf. No.: 7232

In the Claims

Please replace all prior versions, and listings, of claims in the application with the following list of claims:

Please amend claim 1. Please cancel claim 103, without prejudice.

- 1. (Currently Amended) An article comprising: a sample exposure region, and a non-nanotube semiconductor nanowire, at least a portion of which is addressable by a sample in the sample exposure region, and a chemical or biological reaction entity positioned relative to the nanowire such that an interaction between the reaction entity and an analyte in the sample causes a detectable change in a property of the nanowire.
- 2. (Original) The article as in claim 1, further comprising: a detector constructed and arranged to determine a property associated with the nanowire.
- 3. (Withdrawn) The article as in claim 1, wherein the sample exposure region comprises a microchannel.
- 4. (Withdrawn) The article as in claim 1, wherein the sample exposure region comprises a well.
- 5. (Withdrawn) The article as in claim 1, wherein the nanowire is a semiconductor nanowire.
- 6. (Withdrawn) The article as in claim 5, wherein the semiconductor nanowire is a silicon nanowire.
- 7. (Withdrawn) The article as in claim 5, wherein the semiconductor nanowire contains a P-N junction.

Serial No.: 10/020,004 - 3 - Art Unit: 2826

Conf. No.: 7232

8. (Withdrawn) The article as in claim 5, wherein the semiconductor nanowire contains multiple p- n junctions.

- 9. (Withdrawn) The article as in claim 5, wherein the semiconductor nanowire is one of plurality of nanowires wherein each of the plurality of nanowires is doped with different concentrations of a dopant.
- 10. (Withdrawn) The article as in claim 1, wherein the nanowire is a carbon nanotube.
- 11. (Withdrawn) The article as in claim 10, wherein the nanotube is a single-walled nanotube.
- 12. (Withdrawn) The article as in claim 10, wherein the nanotube is a multi-walled nanotube.
- 13. (Withdrawn) The article as in claim 1, wherein the nanowire is an unmodified nanowire.
- 14. (Withdrawn, previously amended) The article as in claim 1, wherein the nanowire further comprises a binding partner of an analyte in the sample.
- 15. (Withdrawn) The article as in claim 14, wherein the binding partner is non-specific.
- 16. (Withdrawn) The article as in claim 14, wherein the binding partner is specific.
- 17. (Withdrawn, previously amended) The article as in claim 14, wherein the binding partner comprises chemical group on the nanowire surface, wherein the chemical group is selected from groups consisting of –OH, -CHO, -COOH, -SO₃H, -CN, -NH₂, -SH, -COSH, COOR, and Halide.

Serial No.: 10/020,004 - 4 - Art Unit: 2826

Conf. No.: 7232

18. (Withdrawn) The article as in claim 14, wherein the binding partner comprises a specific biomolecular receptor selected from the group consisting of DNA, fragments of a DNA, antibody, antigen, protein, and enzyme.

- 19. (Withdrawn, previously amended) The article as in claim 14, wherein the binding partner comprises short polymer chains grafted on the nanowire surface, wherein the chains are selected from a group of polymers consisting of: polyamide, polyester, polyacrylic, and polyimide.
- 20. (Withdrawn) The article as in claim 14, wherein the binding partner comprises a thin hydrogel layer coated on the surface of the nanowire.
- 21. (Withdrawn) The article as in claim 14, wherein the binding partner comprises a thin coating on the surface of nanowires, wherein the coating is selected form the group consisting of oxides, sulfides and selenides.
- 22. (Withdrawn) The article as in claim 1, wherein the nanowire comprises a chemical-gated nanowire field effect transistor wherein an electrical characteristic of the nanowire is sensitive to a chemical change on a surface of the nanowire.
- 23. (Withdrawn) The article as in claim 1, wherein the nanowire comprises a material selected from the group consisting of an electroluminescent material, a photoluminescent material, and a diode, wherein a light emitting property of the nanowire is sensitive to a chemical change on a surface of the nanowire.
- 24. (Withdrawn) The article as in claim 1, further comprising a reaction entity positioned relative to the nanowire such that an interaction between the reaction entity and an analyte in the sample causes a detectable change in a property of the nanowire.

Serial No.: 10/020,004 - 5 - Art Unit: 2826

Conf. No.: 7232

25. (Withdrawn) The article as in claim 24, wherein the reaction entity is selected from the group consisting of a nucleic acid, an antibody, a sugar, a carbohydrate, and a protein.

- 26. (Withdrawn) The article as in claim 24, wherein the reaction entity comprises a catalyst.
- 27. (Withdrawn) The article as in claim 24, wherein the reaction entity comprises a quantum dot.
- 28. (Withdrawn) The article as in claim 24, wherein the reaction entity comprises a polymer.
- 29. (Withdrawn) The article as in claim 24, wherein the reaction entity is fastened to the nanowire.
- 30. (Withdrawn) The article as in claim 24, wherein the reaction entity is positioned within 5 nanometers of the nanowire.
- 31. (Withdrawn) The article as in claim 24, wherein the reaction entity is positioned within 3 nanometers of the nanowire.
- 32. (Withdrawn) The article as in claim 24, wherein the reaction entity is positioned within 1 nanometer of the nanowire.
- 33. (Withdrawn) The article as in claim 24, wherein the reaction entity is attached to the nanowire through a linker.
- 34. (Withdrawn) The article as in claim 24, wherein the reaction entity is attached to the nanowire directly.
- 35. (Withdrawn) The article as in claim 24, wherein the reaction entity is positioned relative to the nanowire such that it is electrically coupled to the nanowire wherein a detectable

Serial No.: 10/020,004 - 6 - Art Unit: 2826

Conf. No.: 7232

interaction between an analyte in the sample and the reaction entity causes a detectable change in an electrical property of the nanowire.

- 36. (Withdrawn, previously amended) The article of claim 3, wherein the microchannel has a minimum lateral dimension less than 1 mm.
- 37. (Withdrawn) The article of claim 3, wherein the microchannel has a minimum lateral dimension less than 0.5 mm.
- 38. (Withdrawn) The article of claim 3, wherein the microchannel has a minimum lateral dimension less than 200 microns.
- 39. (Withdrawn) The article as in claim 1, wherein the nanowire is one of a plurality of nanowires comprising a sensor.
- 40. (Withdrawn) The article as in claim 39, wherein each of the plurality of the nanowires includes at least one portion positioned in the sample exposure region.
- 41. (Withdrawn) The article as in claim 39, wherein the plurality of nanowires comprises at least 10 nanowires.
- 42. (Withdrawn) The article as in claim 41, wherein the multiple nanowires are arranged in parallel and addressed by a single pair of the electrodes.
- 43. (Withdrawn) The article as in claim 41, wherein the multiple nanowires are arranged in parallel to each other and addressed individually by multiple pairs of electrodes.
- 44. (Withdrawn) The article as in claim 43, wherein the multiple nanowires are different, each capable of detecting a different analyte.

Serial No.: 10/020,004 - 7 - Art Unit: 2826

Conf. No.: 7232

45. (Withdrawn) The article as in claim 41, wherein the multiple nanowires are oriented randomly.

- 46. (Withdrawn) The article as in claim 1, wherein the nanowire is positioned on the surface of a substrate.
- 47. (Withdrawn) The article as in claim 1, wherein the sample exposure region comprises a microchannel and the nanowire is suspended in the microchannel.
- 48. (Withdrawn) The article as in claim 1, where the article is one of a plurality of nanowire sensors in a sensor array formed on a surface of a substrate.
- 49. (Withdrawn) The article as in claim 48, wherein the substrate is selected from the group consisting of glass, silicon dioxide-coated silicon and a polymer.
- 50. (Withdrawn) The article as in claim 3, wherein the microchannel is dimensioned so as to produce a Reynolds number (Re) less than about 1 for a fluid comprising the sample.
- 51. (Withdrawn) The article as in claim 42, wherein the Reynolds number is less than about 0.01.
- 52. (Withdrawn) The article as in claim 1, constructed and arranged to receive a fluidic sample in the sample exposure region.
- 53. (Withdrawn) The article as in claim 44 wherein the sample is a gas stream.
- 54. (Withdrawn) The article as in claim 44, wherein the sample is a liquid.
- 55. (Withdrawn) The article as in claim 1, wherein the article comprises a plurality of nanowires and a plurality of reaction entities, at least some of which are positioned

Serial No.: 10/020,004 - 8 - Art Unit: 2826

Conf. No.: 7232

relative to the nanowires such that an interaction between the reaction entity and an analyte causes a detectable change in a property of a nanowire.

- 56. (Withdrawn) The article as in claim 55, wherein at least one reaction entity is positioned within 100 nanometers of a nanowire.
- 57. (Withdrawn) The article as in claim 55, wherein at least one reaction entity is positioned within 50 nanometers of a nanowire.
- 58. (Withdrawn) The article as in claim 55, wherein at least one reaction entity is positioned within 10 nanometers of a nanowire.
- 59. (Withdrawn) The article as in claim 1, where in the sample exposure region is addressable by a biological sample.
- 60. (Withdrawn) The article as in claim 1, where the article forms sensing elements for a micro-needle probe.
- 61. (Withdrawn) The article as in claim 60, wherein the micro-needle is implantable into a living subject.
- 62. (Withdrawn) The article as in claim 60, wherein the article is a sensor capable of monitoring a physiological characteristic.
- 63. (Withdrawn) The article as in claim 60, wherein the sensor is capable of monitoring a plurality of physiological characteristics.
- 64. (Withdrawn) The article as in claim 60, wherein the article is capable of simultaneously monitoring a plurality of physiological characteristics.

Serial No.: 10/020,004 - 9 - Art Unit: 2826

Conf. No.: 7232

65. (Withdrawn) The article as in claim 60, wherein the article is capable of determining at least one of oxygen concentration, carbon dioxide concentration, and glucose level in a subject.

- 66. (Withdrawn) The article as in claim 1, where the article forms sensing elements for an integrated dip-probe sensor.
- 67. (Withdrawn) The article as in claim 1, where the article forms sensing elements for a plug and play sensor array.
- 68. (Withdrawn) The article as in claim 2, wherein the article is capable of delivering a stimulus to the nanowire and the detector is constructed and arranged to determine a signal resulting from the stimulus.
- 69. (Withdrawn) The article as in claim 68, wherein the stimulus is selected from the group consisting of constant current/voltage, an alternating voltage, and electromagnetic radiation.
- 70. (Withdrawn) The article as in claim 2, wherein the detector is constructed and arranged to determine an electrical property associated with the nanowire.
- 71. (Withdrawn) The article as in claim 2, wherein the detector is constructed and arranged to determine a change in an electromagnetic property associated with a nanowire.
- 72. (Withdrawn) The article as in claim 2, where the detector is constructed and arranged to determine a change in a light emission property associated with the nanowire.
- 73. (Withdrawn) A method comprising:

 contacting a nanowire with a sample suspected of containing an analyte; and
 determining a change in a property of the nanowire.

Serial No.: 10/020,004 - 10 - Art Unit: 2826

Conf. No.: 7232

74. (Withdrawn) The method as in claim 73, comprising first measuring a property of the nanowire, then contacting the nanowire with the sample, then determining a change in a property associated with the nanowire.

75. (Withdrawn) A method comprising:

providing an nanowire and contacting the nanowire with a sample having a volume of less than about 10 microliters; and

measuring a change in a property of the nanowire resultant from the contact.

76. (Withdrawn) A method comprising:

contacting a nanowire with a sample suspected of containing an analyte and determining the presence or quantity of the analyte by measuring a change in a property of the nanowire resulting from the contact, wherein less than ten molecules of the analyte contribute to the change in the property detected.

- 77. (Withdrawn) The method of claim 76, wherein less than 5 molecules of the species contribute to the change in electrical property.
- 78. (Withdrawn) The method of claim 77, wherein one molecule of the species contributes to the change in electrical property detected.

79. (Withdrawn) An article comprising:

a sample cassette comprising a sample exposure region and a nanowire, at least a portion of which is addressable by a sample in the sample exposure region, wherein the sample cassette is operatively connectable to a detector apparatus able to determine a property associated with the nanowire.

Serial No.: 10/020,004 - 11 - Art Unit: 2826

Conf. No.: 7232

80. (Withdrawn) A sensor comprising:

at least one nanowire; and

means for measuring a change in a property of the at least one nanowire.

81. (Withdrawn) A method of detecting an analyte, comprising:

contacting a nanowire with a sample; and

determining a property associated with the nanowire where a change in the property when the nanowire is contacted with the sample indicates the presence or quantity of the analyte in the sample.

82. (Withdrawn) A method comprising:

contacting an electrical conductor with a sample; and

determining the presence or quantity of an analyte in the sample by measuring a change in a property of the conductor resultant from the contact, wherein less than ten molecules of the analyte contribute to the a change in said property.

83. (Withdrawn) An article comprising:

a nanowires core region and an outer region, wherein outer region comprises functional moieties which are chemically or physically bonded to the nanowire core.

- 84. (Withdrawn) The article as in claim 83, wherein the core is a semiconductor nanowire, comprising material selected from the group consisting of: Si, GaN, AlN, InN, GaAs, AlAs, InAs, InP, GaP, SiC, CdSe, ZnSe, ZnTe, ZnO, SnO₂, and TiO₂.
- 85. (Withdrawn) The article as in claim 83, wherein the nanowire core has a diameter ranging from 0.5 nm to 200 nm.
- 86. (Withdrawn) The article as in claim 83, wherein the nanowire core has an aspect ratio more than 2.

Serial No.: 10/020,004 - 12 - Art Unit: 2826

Conf. No.: 7232

87. (Withdrawn) The article as in claim 83, wherein the functional moieties at the outer region are groups or combinational groups selected from the groups consisting of –OH, -CHO, -COOH, -SO₃H, -CN, -NH₂, -SH, -COSH, COOR, and halide.

- 88. (Withdrawn) The article as in claim 83, wherein, the functional moieties are groups selected from the group consisting of amino acids, proteins, DNA, antibodies, antigens, and enzymes.
- 89. (Withdrawn) The article as in claim 83, wherein the functional moieties comprise grafted polymer chains with chain length less than the diameter of the nanowire core, selected from a group of polymers including polyamide, polyester, polyimide, polyacrylic.
- 90. (Withdrawn) The article as in claim 83, where the functional moieties comprise a thin coating covering the surface of the nanowire core, selected from the group consisting of metals, semiconductors, and insulators.
- 91. (Withdrawn) The article as in claim 90, wherein the coating is selected from the group consisting of a metallic element, anoxide, a sulfide, a nitride, a selenide, a polymer, and a polymer gel.
- 92. (Withdrawn) A nanowire sensor device, comprising

a semiconductor nanowire having a first end in electrical contact with a conductor to form a source electrode, a second end in electrical contact with a conductor to form a drain electrode, and an exterior surface having an oxide formed thereon to form a gate electrode, and

a binding agent having specificity for a selected moiety and being bound to the exterior surface, whereby a voltage at the gate electrode varies in response to the binding of the moiety to the binding agent to provide a chemically gated field effect sensor device.

Serial No.: 10/020,004 - 13 - Art Unit: 2826

Conf. No.: 7232

93. (Withdrawn) A analyte-gated field effect transistor having a predetermined current-voltage characteristic and adapted for use as a chemical or biological sensor, comprising:

- (a) a substrate formed of a first insulating material;
- (b) a source electrode disposed on the substrate;
- (c) a drain electrode disposed on the substrate,
- (c) a semiconductor nanowire disposed between the source and drain electrodes to form a field effect transistor having a predetermined current-voltage characteristic; and
- (d) an analyte-specific binding agent disposed on a surface of the nanowire, wherein a binding event occurring between a target analyte and the binding agent causes a detectable change in the current-voltage characteristic of said field effect transistor.
- 94. (Withdrawn) The analyte-gated field effect transistor of claim 93, wherein the analyte is a chemical moiety.
- 95. (Withdrawn) The analyte-gated field effect transistor of claim 94, wherein the chemical moiety is a small organic compound.
- 96. (Withdrawn) The analyte-gated field effect transistor of claim 94, wherein the chemical moiety is an ion.
- 97. (Withdrawn) The analyte-gated field effect transistor of claim 93, wherein the analyte is a biological moiety.
- 98. (Withdrawn) The analyte-gated field effect transistor of claim 97, wherein the analyte is selected from the group consisting of proteins, nucleic acid, carbohydrates, lipids, and steroids.
- 99. (Withdrawn) An article comprising array of at least 100 of said analyte-gated field effect transistor of claim 93.

Serial No.: 10/020,004 - 14 - Art Unit: 2826

Conf. No.: 7232

100. (Withdrawn) The article of claim 99, which is homogenous with respect to a population of analyte-specific binding agents associated with the article.

- 101. (Withdrawn) The article of claim 99, which is heterologous with respect to a population of analyte-specific binding agents associated with the article.
- 102. (Withdrawn) The article as in claim 24, wherein the reaction entity is positioned relative to the nanowires such that it is optically coupled to the nanowire wherein a detectable interaction between an analyte in the sample and the reaction entity causes a detectable change in a property of the nanowire.
- 103. (Canceled).
